

Project Proposal

By Group RAP

Main Project Ideas:

1. **Organiser web app:** Organizer, your daily schedule and finance assistant.

Features:

- a. Schedule: layout your daily thoughts, comments, notes, and events. The timed trigger event will always send you an email. (Core)
- b. Finance Organiser: Organiser your finance Like spending, saving and recurring bills. (Extra)
- c. Goal-Based Saving feature which will be a unique offering, (Extra)
 - i. For eg: Anybody planning to buy a MacBook pro, Estimated Cost 2500\$. Will need to save that much if they don't want a credit-based working and paying extra so in states have bi-weekly, weekly pay which goes directly to their account after reduction of tax and will want to make sure that they have saved so we organizer how much they can save and spend within time frame.
- d. A pie-based chart to show spending, saving in the category. (Extra)
- e. Accounting for multiple accounts. (Extra)

Other ideas:

2. **Ingredients to Table:** A web application that allows the user to enter in the items they have in the fridge or pantry, and then it displays possible recipes they can make with that.
3. **Advanced Stevens Scheduler:** A web application that has the student lists all the classes they need to take, and then this shows all the options their schedule can be arranged.
4. **Tinder app for animal adoption:** You can swipe right on animals that you want to adopt. If the animal owner or shelter likes you back, it's a match! Can have filters such as distance, age, etc.

5. **Broadway Lottery Applier:** For filling out Broadway lotteries to get tickets at a discount, you always have to enter a lengthy form. This can solve that and given your general credentials, it can enter lotteries for you.
